

Development Tools

Notes for the SIT-DP module: **Developing Immersive Applications**

Created by: Chek Tien TAN

Unity → AR/VR project templates
common XR packages and stuff
can create various games and is cross-platform

Unreal → C++ scripting also allowed apparently

A-Frame → web-based tool, javascript library

↓
can only exist on web

- cons {
- ✓ limits immersion from system as you can only access web technologies and what is provided by browser developers
 - ✓ different browsers different items
 - ↳ though WebXR resolves that to an extent
 - group of standards
- benefits {
- ✓ anyone with browser can access XR interactions and experiences
 - ↳ better accessibility
 - ↳ sketchfab
 - ↳ conducive for learning

BabylonJS → javascript library : typescript
↳ has a playground to test and run code } web-based tools
↳ has inspector

WebXR - set of open APIs that standardize how XR apps are created on the web

✓ immersiveweb.dev

✓ immersive web working group → chairs from apple, microsoft, google

Native → C++ library and Open Khronos Group

OpenXR → aims to be the underlying implement for webXR
normally only go this route if you need
✓ unique novel features
✓ ultra custom code close to the targeted platform

BabylonJS
A-Frame
Unity
Unreal

Low Code → Cospaces → designed for low barrier entry even with 0 coding experiences
✓ a fun endpoint to start learning
✓ probably not for business use

which tool to use is dependent on your requirements

✓ if you know what your audience is and whether they have the equipment for it, you can target that

{ medical & have access to Oculus? then choose that!
want to crowdsource and get apps to everyone? then maybe babylonjs

✓ cost of using the tools → open source free
→ proprietary has contracts

✓ stability of the tool

✓ customizability and extensibility → how to make your things stand out

✓ community and support

✓ learning opportunities

why are we using babylonjs to build webxr apps

✓ facilitate learning

↳ accessibility for users → since some may not have XR devices

✓ large, active dev community

↳ longevity of the tool

✓ accessibility for devs — since they are driving some of the standards
large community as well already building with XR

✓ nuanced technicalities

↳ can apply knowledge and learn more technical considerations
when designing the application and develop more unique & immersive experiences

✓ applied learning premise

↳ hands-on research prototype called XR author we will be contributing to

↳ allow us to apply technical learning

slido

Please download and install the
Slido app on all computers you use

**Join at slido.com
#week03-dev-tools**

① Start presenting to display the joining instructions on this slide.

Module Essentials

Let's check whether you understand what to do in CSD312x...

slido

Please download and install the
Slido app on all computers you use

The deliverable for the TP is

- everything in your github repo

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

The deadline for the TP is

• week 8

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

**I need to use a WebXR-compliant
framework for my Team Project**

- we don't have a implement software
for our project

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

We will be assessed more favourably if we can demonstrate higher levels of immersion from our evaluation.

• no

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

**Which of the following content is
suggested to be included in the TP
report.md?**

- methodology
- results
- discussion

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

When is IPA1 due?

who cares

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

**How many participants do I need
for the user study in the TP?**

- as many as needed to make your study meaningful

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

In CSD312x, a key learning objective is to be proficient in building WebXR applications.

• false

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

In CSD312x, a key learning objective is to be proficient in implementation skills using typescript and Babylon.js API.

• false

① Start presenting to display the poll results on this slide.

slido

Please download and install the Slido app on all computers you use

In CSD312x, it is important to understand the basics of how to setup a Typescript/Javascript project that interacts with Babylon.js .

• true

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

**For the IPAs , we will get feedback on
our submission only after the
deadline.**

- false*

① Start presenting to display the poll results on this slide.

* technically only if you submit early
and feedback
still comes in after submission

Team Project

- You can loan HMDs
- Submit through GitHub
- Note the dir tree
- The meat is in report.md
- Teams should be confirmed already
- Have an explicit system to delegate/manage work

IPA1

- Due next weekend
- We are available on Fri (and on GitHub discussions)

Development Tools

Let's get acquainted with common tools for developing immersive apps

slido

Please download and install the Slido app on all computers you use

When I run `console.log("debug")`, where can I see this "debug" message?

- MAC Terminal
- Windows Command Prompt
- Web Browser's Javascript Console
- ADB's logcat

① Start presenting to display the poll results on this slide.

slido

Please download and install the Slido app on all computers you use

You are building a VR application that includes a novel interaction not found in current VR applications. Your lab has funding to obtain resources deemed necessary for development. Which tool(s) can likely be used for you to base your development on?

- Unity

- OpenXR SDK in C++

- Babylon.js

① Start presenting to display the poll results on this slide.

- Cospaces

- Blender

slido

Please download and install the Slido app on all computers you use

You are building a web-based VR experience and you want to focus on implementing the VR components. You need a modern open standard with a vibrant developer ecosystem that constantly updates the underlying tooling. What standard should you ideally target?

- OpenXR

- Vulkan

- WebXR

- WebGL

① Start presenting to display the poll results on this slide.

- OpenGL

- OpenCL

slido

Please download and install the Slido app on all computers you use

In your VR app, realistic graphics is the most important and you need to have fine-grained control of GPU resources. You need an open standard with a robust community that actively maintains the underlying tooling. What standard should you ideally target?

- OpenXR
- Vulkan
- WebXR
- WebGL

① Start presenting to display the poll results on this slide.

- OpenGL
- OpenCL

slido

Please download and install the Slido app on all computers you use

What is the most accessible tool for developers without coding experience?

• Babylon.js

• Cospaces

• Unity

• OpenXR SDK in C++

① Start presenting to display the poll results on this slide.

• Unreal Engine

slido

Please download and install the Slido app on all computers you use

What is/are the key advantages of building a WebXR app?

- fairly accessible XR apps for the public

- consistently strong developer community support

- easily accessible development tools for developers

① Start presenting to display the poll results on this slide.

- able to exploit hardware advancements in latest XR devices

- easily create highly performant experiences native to different XR devices

slido

Please download and install the Slido app on all computers you use

WebXR is an open-source 3D engine for building web-based XR applications

- true

- false

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

**Babylon.js is an open standard for
programming web-based XR
applications**

• true

• false

① Start presenting to display the poll results on this slide.

slido

Please download and install the Slido app on all computers you use

The Unity engine can be used to build WebXR applications

• true

• false

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

Babylon.js can be used to build Web-based AR applications

- true

- false

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

**WebXR is only meant for building
desktop 3D web applications**

• true

• false

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

Rank from the best to worst tool ecosystem, in your perspective, for creating immersive applications

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

What is your personal favourite tool ecosystem for creating interactive 3D (including immersive) applications?

① Start presenting to display the poll results on this slide.

slido

Please download and install the
Slido app on all computers you use

Audience Q&A

① Start presenting to display the audience questions on this slide.
